

To the FCC, My name is John Boulos and I have been a subscriber of XM radio for almost a year now. I am very pleased with all of there services and the addition of the traffic and weather channels has only increased my satisfaction with this service. I understand that all companies have to follow regulations and Laws, however, I do not see how banning the weather and traffic channels will have any positive effects. I personally do alot of traveling, and haveing the benefit of recieving weather reports immediately has made my driving experiences safer. I would be largely dissapointed with the National Association of Broadcasters if they took away my right to recieve quality weather and traffic programming at a very reasonable price. I urge members of the congress, senate and FCC to reject the NAB's petition 04-160, and to continue to allow our first ammendment rights to be protected.

Thank you for your time and forthought,
John Boulos
